### ⚠ Should Fix:

## Eliminate render-blocking JavaScript and CSS in above-the-fold content

Your page has 11 blocking script resources and 18 blocking CSS resources. This causes a delay in rendering your page.

None of the above-the-fold content on your page could be rendered without waiting for the following resources to load. Try to defer or asynchronously load blocking resources, or inline the critical portions of those resources directly in the HTML.

## 🔶 Consider Fixing:

### Enable compression

Compressing resources with gzip or deflate can reduce the number of bytes sent over the network.

[Enable compression](#) for the following resources to reduce their transfer size by 140B (35% reduction).

- Compressing https://yandex.ru/set/s/rsya-tag-
  users/data?_rnd=1562707809073&referrer=https%3A%2F%2Fdacha365.net%2F could save
  140B (35% reduction).

### Leverage browser caching

Setting an expiry date or a maximum age in the HTTP headers for static resources instructs the browser to load previously downloaded resources from local disk rather than over the network.

[Leverage browser caching](#) for the following cacheable resources:

- https://any.realbig.media/1htad.json (expiration not specified)

## Prioritize visible content

Your page requires additional network round trips to render the above-the-fold content. For best performance, reduce the amount of HTML needed to render above-the-fold content.

The entire HTML response was not sufficient to render the above-the-fold content. This usually indicates that additional resources, loaded after HTML parsing, were required to render above-the-fold content. Prioritize visible content that is needed for rendering above-the-fold by including it directly in the HTML response.

- Only about 27% of the final above-the-fold content could be rendered with the full HTML response.

## 99 / 100 User Experience

### Consider Fixing:

### Size tap targets appropriately

Some of the links/buttons on your webpage may be too small for a user to easily tap on a touchscreen. Consider making these tap targets larger to provide a better user experience.

The following tap targets are close to other nearby tap targets and may need additional spacing around them.

- The tap target <a class="btn-bs-paginat...s-slider-arrow"></a> is close to 2 other tap targets.

- The tap target <a class="btn-bs-paginat...s-slider-arrow"></a> is close to 2 other tap targets.
